

## Press release 04/2025 – BESSEY expands the STE telescopic support range once again

### Even more sizes – even more accessories

From June, two new sizes will be added to the existing product range, enabling continuous clamping heights from 400 mm to 3,700 mm – and even up to 3,800 mm with the swivelling contact surfaces turned out to the maximum. In autumn, the range of accessories will also be expanded, offering even more application options and additional safety when using these powerful supports.

The STE supports with integrated pump handle are versatile.

Whether in kitchen and shop fitting, for positioning wall units or in drywall construction for securing building materials at great heights, the six sizes of telescopic drywall supports STE stand for high load capacity and convenient one-handed operation. With a maximum load limit of 350 kg when the telescopic rod is retracted – and even when fully extended in the two shortest versions – these supports are the most powerful on the market. In addition, the four longest models are GS-certified, offering tested safety. Their integrated 2-component plastic handle with pump mechanism and quick-slide button enables convenient one-handed operation in three steps: pull out the inner tube, pump until the pressure plate is in contact and turn clockwise to achieve the holding force on the handle. This makes work quick, safe and efficient.

The telescopic supports of the STE series also feature an enormous range of applications. Thanks to continuously adjustable pressure plates made of non-slip TPU, they can also be used on sloping surfaces without any problems. Perfectly matched accessories offer additional flexibility and safety.

#### The current accessory range:

- **Fixture STE-LH** – for attaching lasers, cameras or construction lights
- **Support plate STE-SP35** – for secure hold even on sloping surfaces
- **Ceiling tripod STE-DS** – for increasing the support surface
- **Construction tripod STE-BS** – for a secure stand, even free-standing
- **Combi-bag STE-BAG** – for transporting and storing the supports

#### Further accessories will start in September:

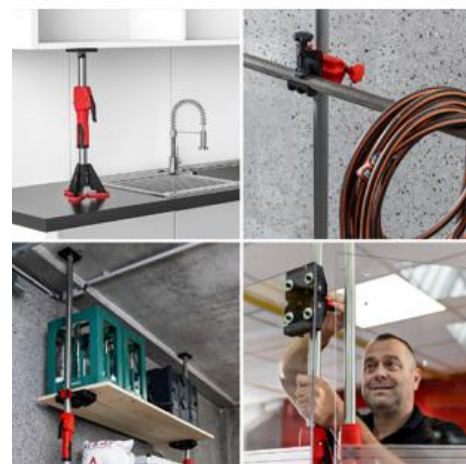

- **Small construction tripod STE-KBS** – for upright positioning and secure pre-positioning of the two shortest telescopic supports
- **Large multifunction fixture STE-MH-SET** – for temporary partition walls or storage surfaces with a load capacity of 50 kg per fixture
- **Cross connector STE-CC-SET** – for fastening pipes or as a suspension for lamps, bicycles, and much more

With this expansion of its product range, BESSEY once again underlines its commitment to providing innovative solutions for the trade – powerful, well thought-out and practical.
